

La Ventana Mine Safeguard Project - Phase II

The Abandoned Mine Land Program (AML) safeguarded seven coal mine subsidence features located near La Ventana, south of Cuba, in Valencia County, New Mexico. The project area is located on the USGS San Pablo quadrangle, and encompasses 3.5 acres of private land. Due to the hazards associated with abandoned mines, AML proposes to close these seven subsidences to enhance overall public safety.

[Scope of Work details.](#)

The project involved the following work:

- Removing material and backfilling seven mine features
- Site Grading and Extreme Roughening
- Seeding of all areas disturbed by construction.

Contractor: E&E Excavation, La Madera, NM

Year Completed: 2007
